title, which was added in the Preliminary Amendment submitted on July 20, 2001, with the following replacement paragraph. A marked-up copy of this paragraph, showing the changes made thereto, is attached.

--This application is a division of Application No. 08/352,883, filed on December 9, 1994, now U.S. Patent No. 6,301,016.--

IN THE CLAIMS:

Please cancel Claim 1, without prejudice or disclaimer of the subject matter presented therein.

Please add new Claims 23-27 as follows.

23. (New) A data processing apparatus connectable to a LAN, comprising:

an input unit adapted to input data;

an identification unit adapted to identify a user for whom the data inputted by said input unit was received;

a transfer unit adapted to transfer the data inputted by said input unit to a terminal connected to the LAN; and

a generation unit adapted to generate a predetermined signal to notify the user that the data has been transferred by said transfer unit.

24. (New) A data processing apparatus according to Claim 23, further

comprising:

a storage unit adapted to store information used to discriminate to which

terminal the data is transferred by said transfer unit.

25. (New) A data processing apparatus according to Claim 23, wherein said

transfer unit transfers the data inputted by said input unit when a printer for printing the data is in

an error state.

26. (New) A method of controlling a data processing apparatus connectable to

a LAN, comprising the steps of:

inputting data;

identifying a user for whom the data inputted in said inputting step was

received;

transferring the data inputted in said inputting step to a terminal connected to

the LAN; and

generating a predetermined signal to notify the user that the data has been

transferred in said transferring step.

27. (New) A computer-readable storage medium storing a program for

implementing a method of controlling a data processing apparatus connectable to a LAN,

wherein the method comprises the steps of:
